2 Abstract

The aim of this project is to investigate inflationary models and discover new models that give near scale invariance in accordance with Cosmic Microwave Background data.

3 Introduction

3.1 Cosmological Principle

3.2 Hubble Law

3.3 Cosmic Microwave Background (CMB)

3.4 Cosmological Problems

3.5 Inflation and why it is needed

3.6 Aims of the Project

4 Theory

4.1 Friedmann Equations

4.2 Inflation

4.3 Mukhanov Sasaki Equation

4.4 Power Spectrum

$$P(k) = A \left(\frac{k}{k_0} \right)^{n_s-1} \quad (1)$$

$$n_s - 1 = \frac{\log(P(k))}{\log(k)} \quad (2)$$

4.5 Spectral Index

5 Matching Conditions

5.1 Outline

$$\left[k^2 - \frac{a''}{a} \right] = 0 \quad (3)$$

$$\frac{1}{\sqrt{k}} \approx a(\eta)F(k) \quad (4)$$

$$P(k) = k^3 \frac{v^2}{a^2} = k^3 F(k)^2 \quad (5)$$

5.2 Constant w

$$a \approx \eta^{\frac{2}{3w+1}} \quad (6)$$

$$n_s(w) = 4 \pm \frac{3(1-w)}{3w+1} \quad (7)$$

5.3 Jacobi Elliptic Function Solutions

The matching condition method can be used to derive an expression for $a(\eta)$ that gives scale invariance. Equation 4 can be expressed purely in terms of the scale factor and its derivatives with respect to conformal time using equation 3 to give the following.

$$a(\eta) \approx \frac{1}{F\left(\sqrt{\frac{a''}{a}}\right)\left(\frac{a''}{a}\right)^{\frac{1}{4}}} \quad (8)$$

From equations 2 and 5 it can be seen that $F(k) \propto k^{-\frac{3}{2}}$ is required for exact scale invariance. If this condition is imposed in equation 8 a second order differential equation can be found for the the scale factor $a(\eta)$.

$$a''(\eta) \propto a(\eta)^3 \quad (9)$$

It is immediately clear to see that $a \propto \frac{1}{|\eta|}$ is a solution.

6 Hamiltonian Jacobi

6.1 Outline

The evolution of scalar fields is described by the Klein [1] Gordon Equation

$$\ddot{\phi} + 3H\dot{\phi} + V'(\phi) = 0 \quad (10)$$

$$H^2 = \frac{8\pi}{3m_{pl}^2} \left[\frac{1}{2} \dot{\phi}^2 + V(\phi) \right] \quad (11)$$

6.2 Intermediate Inflation

6.3 $n_s = 1$

6.4 $n_s \neq 1$

6.5 Proof of Slow roll

6.6 Equation of State

6.7 Potential

7 Conclusion
